Advancing Nuclear – The role of Digital & APM

- The market today - >19% of US generation in 2018, average plant age 38 years, continued push to significantly reduce O&M costs - create today the model for tomorrow's assets and industry
- Learning from today's reality in operations and maintenance – people, process, data and equipment
- Immediate opportunities to drive value and create an APM marketplace through operational excellence and industry collaboration – template for the future
- The role of operational AI and learning twins from cradle to grave APM, to action insights and sustain efficiencies – its not easy, even with new more automated and talkative assets...
- A thought-leader for asset-intensive Industry...more autonomous operations synced with safety and risk-based analytics in the Board room - the Nuclear Industry has it all!
